Moore Seed Company's Select List of Extra Quality Flower Seeds

QUALITY—PRICES. Do not confound our high quality Flower Seeds with the usual imported grades sent out by other houses, which are grown cheap, sold cheap, and are in every way expensive to the buyer. Our seeds are cultivated with a view of obtaining the highest possible mark of perfection and to supply a class of people who want nothing but the very best. We have made the price as low as possible consistent with the high quality of all the seeds herein offered.

WE give very close attention to our Flower Seed Department, and we have gone to much trouble and expense to improve the leading specialties, such as

ASTERS, CINERARIAS, CYCLAMEN, MIGNONETTE, PANSY, PHLOX, PETUNIA, PRIMULAS, CALCEOLARIAS, STOCKS, VERBENAS, ZINNIAS

and many other classes, and they are now grown by the most critical florists in the country.

Purchasers will find our **superb mixtures** of the above to be of unexceptional merit, which cannot be obtained elsewhere.

A TRIAL ORDER will convince any one of the high quality and superiority of our varieties. **Florists, especially,** will derive great benefit from buying their flower seeds from us.

WE allow Florists and Market Gardeners a discount of 33½ per cent. on seeds quoted by the packet. Trade packets, ounces and pounds are net. We do not furnish ½ trade packets except where noted. Fractions of an ounce are furnished at a slight advance over the ounce price.

OUR BUSINESS RULES—About Warranting Seeds, etc.—THE MOORE SEED CO. give no warranty, express or implied, as to description, quality, productiveness or any other matter of any Seeds, Bulbs or Plants they send out, and they will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

No. 144. ASPARAGUS HYBRIDUS ERECTUS FLORIBUNDUS

This is a plant of great value to the florist and growers of foliage for cutting, as it makes splendid material for decoration. In its cut state it will keep fresh for weeks, even without water. It has no thorns. Its cultivation is very simple; it only requires a cool house. There is big money in growing this plant. It produces shoots from 6 to 6 feet long, which grow straight upward without showing the least tendency to wind. By pinching out the tops of the young leaders before the laterals appear numerous side shoots 2 to 3 feet long are easily obtained. When grown in a 5-inch pot 15 to 20 trails or shoots are easily produced. When of sufficient age thousands of snow-white ar-like flowers cover the plant and it continues to bloom all the time. It makes a splendid room or conservatory decoration. Give it a trial. Pkt. 30c., trade pkt. \$1.00, 100 seed \$3.00, 1,000 seed \$28.00.

It is an extremely vigorous grower, floriferous to a degree, and gives a large proportion of four-flowered sprays. An ideal white for the florist. New Cactus Aster

Single Japanese Aster

UNICUM BRANCHING ASTER

A variety of European origin; but the stock which we offer is American-grown, and we believe of higher quality than can be procured abroad. It is a most distinct and distinguished-looking flower, being made up of long, thread-like, wonderfully curled quilled petals, which forms an airy, graceful bloom, nicely shown in the illustration. These are of very large size, rarely less than 5 inches in diameter, held erect on long, wiry stems; grows 18 inches high, blooming early; excellent for cutting. This variety will appeal to those who want something different from the usual run of Asters.

GERMAN INVINCIBLE ASTERS

This valuable class is a wonderful achievement in China Asters, a superior race in every way. The plants are of very healthy, robust, branching growth, about two feet high, producing, on long stems, massive, peony-formed flowers of perfect form and faultless outline, and exceedingly double to the very centre. The flowers are the most beautifully formed of all large Asters. The petals are of thick durable substance, and, in consequence, the flowers last long in perfection. These Asters are wonderfully prolific and continuous bloomers from summer until checked by frost. When grown in masses in garden borders, or grouped in beds, their decorative effect is unapproachably gay and enlivening. When well grown the flowers of German Invincible Asters average 3½ inches across; 4-inch flowers are quite common, and if grown especially for cut flowers, the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem, their size will then be enormous, measuring 4½ to 5 inches across. These magnificent blooms being gracefully poised on strong, well-leaved stems and are unsurpassed as cut flowers for vases, pots, floral work, and home decoration. Should be well fertilized.

SINGLE JAPANESE ASTER

Highly valuable and strikingly handsome new single Asters which bear large star-shaped flowers, resembling those of the lately introduced single-blooming Japanese Chrysanthemums. The yellow central disk is encircled by a wreath of long, quilled ray petals, either white or delicate rose, which lend to the bloom an uncommonly graceful and bizarre aspect. Of branching habit, the plant throws up a large number of strong side-stalks right from the base of the main stem. This places the single Japanese Aster in the very front rank as a florist cut flower, but it can also be used with advantage for late summer bedding.

MOORE'S GIANT PERFECTION CYCLAMEN

Moore's Giant is a magnificent strain of cyclamen with flowers of extraordinary size and substance, and have gained a national reputation of the highest merit. The leaves are of proportionate size and beautifully marked with gray.

Sow at any time (spring and autumn to be preferred) in pots or pans, in peaty loam and sand, covering the soil scarcely a quarter of an inch, place on warm shelf near the glass in greenhouse, keeping the soil moist but well drained. The seed takes from four to eight weeks to germinate. When the bulbs are the size of a pea transplant singly into small pots, transferring to larger pots as the plants develop. An average of 60° is the temperature best suited for producing well-developed flowers, and good ventilation without draught is a safeguard from disease.

MARVELOUS "DAYBREAK" ASTER

No. 309. This new Aster is a midsummer flowering variety, healthy and vigorous in growth, of upright bushy habit and very profuse bloomers—veritable bouquets of flowers—and in consequence are unrivaled for bedding, pot sales or cutting. The flowers—borne on good long, stiff stems—are so very double as to appear almost like balls. The petals, short and narrow, are slightly folded and of durable, lasting substance. While splendid as cut flowers, it is the Aster—par excellence—for our American climate and conditions. Very delicate pink shade. (See illustration.) Pkt. 10c., trade pkt. 40c., oz. 25c.

COSMOS

No. 747, Double Pink Beauty. Pkt. 20c., Trade pkt. 40c. No. 748, Double White Queen. Pkt. 20c., Trade pkt. 40c.

BEGONIA GRACILIS

No. 341. White Pearl

The pure snowy white blooms of this new variety measure quite $2\frac{1}{2}$ by 1 inch across and appear in large loose clusters well above the bright, pale green foliage, forming a beautiful contrast with it. In habit, size and freedom of bloom, White Pearl closely resembles the beautiful Gracilis Magnifica, a recent introduction of ours, and one which has already gained great popularity everywhere. A white-blooming Begonia has hitherto been lacking in the Gracilis section, our new variety will therefore doubtless prove very valuable for all kinds of decorative work. Begonia gracilis White Pearl has besides the advantage of coming true from seed, and we feel confident that it will establish itself as a valuable variety for every florist. Pkt. 50c., Trade pkt. \$1.00.

Marvelous Daybreak Aster

PETUNIA

No. 1714. Moore's Mammoth Flowered, Fringed, Dwarf, Compact

The demand for really good dwarf, compact-growing Petunias has long made itself felt, and now, after several years of patient selection, we are in a position to meet it by introducing an excellent dwarf strain with large fringed flowers of this ever popular plant. These plants only grow about 8 inches high and while branching freely from the base they nevertheless remain quite compact, so that no tying is required. Thus the individual plants make handsome small bushes, on which the numerous flowers borne well above the foliage, appear in all colors common to Petunias. This new dwarf race will doubtless be especially welcome to market-growers for pot work, but also prove of great value for the laying out of flower beds and borders. The colors and rich markings are truly charming. Pkt. 25c., $\frac{1}{2}$ Trade pkt. 60c., Trade pkt. \$1.00.

Purity Aster

IMPROVED PURITY ASTER

No. 310. This variety is identical in every way to Daybreak, being of the same symmetrical growth, height and free-flowering qualities; the flowers, however, instead of being pink, are pure glistening white. Are of exquisite form and are produced in great abundance. The plants are extremely vigorous, dark leaves and long strong stems. It makes a superior cut flower, which holds up well after being cut. Pkt. 10c., Trade pkt. 40c., oz. \$2.50.

The cardinal feature of these plants is an extreme hardiness, which enables them to withstand quite severe winters and to bloom right on into the summer. They have also an appreciable pleasant perfume. On account of their extraordinary early blooming these Pansies are of great value to florists and landscape gardeners. This new giant-blooming earliest class can be warmly recommended. Their markings and colors are very pretty. Pkt. 25c., Trade pkt. 50c., ½ oz. \$1.00, oz. \$7.00.

MOORE'S HARDY PERENNIAL FLOWER SEEDS

Specially Selected for Florists' Use

Hardy perennials are easily raised from seeds; they may be sown either in spring or during the early summer. The simplest method is to sow them in a frame, protecting the seedlings as they appear above ground from the sun. The soil should be kept evenly moist but not saturated. Transplant the seedlings once or twice if necessary to prevent crowding. We have endeavored to select the varieties best adapted for profitable florist use.

"TARGET BRAND" SCALE DESTROYER.

Guaranteed and Especially Prepared for the destruction of San Jose Scale on all kinds of fruit and shade trees. 200 per cent. more effective than lime, sulphur and salt preparations and fully 50 per cent. more economical.

It is thoroughly soluble in water and will not separate, nor does it need to be agitated while spraying. It can even be mixed a day or two before being used, and allowed to be stored in the spray tank or other vessels without separation. When diluted with water it is positively neutral, there being no chemicals which could do harm to the trees, or roots, or any other material it comes in contact with. It can be diluted in hard or soft water, and represents the cheapest, easiest to prepare, and the most reliable spray for fruit growing either on a large or small scale. It is very economical; one gallon makes from 25 to 40 gallons spraying liquid. Remember, the secret of successful spraying is thoroughness of application and in the finest possible mist. Price, put up in packages, as follows: 1 qt. 35c., 2 qts. 65c., 1 gal. \$1.00, 5 gals. \$3.75, 10 gals. \$7.50, 25 gals. \$13.75, 50 gals. in wood \$25.00, 100 gals. and over 60c. per gal.

The dilution is 1 to 50 parts of water made so easily that a boy or child can attend to it. A remedy that not only reduces the amount of labor, but does it at about one-tenth the cost. A gallon diluted is sufficient to cover a space of 100 to 150 square yards.

Application is best made with a watering can to insure uniform distribution, the most advisable time being after a rain, which is when weeds start to sprout and grow. "Target Brand" Weed Killer effectively destroys the roots as well as the top growth, and single applications last almost an entire season. 1 gallon makes 50 gallons of liquid.
